

# SOFT-MUD BRICK-SLIP MAKING MACHINES

- The direct and energy efficient way to make soft-mud brick slips
- Saving over 50 % on raw materials and energy for drying and firing
- And of course the true look of moulded bricks

# A BRICK WANTS TO BE MORE THAN JUST A BRICK, A BRICK SLIP (THIN BRICK) WANTS TO BE MORE THAN JUST A BRICK SLIP ...

De Boer Machines Nederland and Petersen Maskinfabrik Denmark developed the machines to produce brick slips or thin bricks with exactly the same appearance as soft-mud moulded bricks, or bricks produced by turning table.

With these systems, only the brick slip itself is dried and fired, any excess clay is reworked into the mixer:

- No need to cut full bricks with expensive sawblades
- No loss through breakage during cutting
- No waste of fired material
- Huge savings in raw materials  
energy for drying  
energy for firing

The moulded brick slips - or thin brick - can be made:

- With soft sanded face
- Saw dust fired face
- "Waterstruck" type, moulded or by turning table
- Clot thrown, hand moulded appearance

and an added feature is the possibility to have an imprint into or onto the brickface.
